

2 for the price of 1

Orthotic footwear at affordable prices!

Our stock range are ready to be custom fitted, in fact it takes about half an hour and the client can walk in comfort.

The price of these orthotic shoes, boots, sandals, scuffs, house/comfort slippers – you can purchase two pairs for the price of one, and some people even purchase a pair of orthoses to wear in their sports footwear, joggers, sand shoes or fashion shoes etc.

Back in 1999 ‘A Current Affair’ came to film some of my inventions – because of its uniqueness many people from all states came and some of them are still coming to replace their footwear and orthoses/orthotics.

Many of them travel in the morning and very often go back in the afternoon!

Our service is mainly same-day service. Since 1999 I have upgraded our workshop footwear making and this now saves us time in manufacturing. This is why we can now offer high quality medical grade footwear at affordable prices...

Some of my clients have told me that even traveling on the plane to Launceston is worth it all because of the instant relief they experience when they wear Ovidio orthotic footwear and orthoses, and the low prices compared to other states. Many clients will only wear the Ovidio footwear – some wear them most of the time and at other times wear the orthotics with joggers, sports shoes or fashion shoes.

As it has been for about 4 years, Ovidio footwear and orthoses have been top of the range in quality and low prices.

Orthotics fitted to the feet and general footwear, completed with adjustment: \$160

Second pair: \$130

Third pair: \$110 when required

As for a survey we did some time ago, orthotics prices averaged \$350 for half a piece of plastic that many times the client could not wear because it was too uncomfortable and aggravating their condition. Every week we have people coming to us who cannot wear their existing orthotics, wanting to inquire if we sell shoes so that they can ‘wear’ the orthotic in, which we don’t! If orthotics are not comfortable, they should be returned to where they came from!

To get the best results, feet, footwear and the orthotics need to be assessed – these three factors should be considered all together – in this way people can receive the proper treatment. Discomfort by wearing orthotics is often caused by footwear that may need adjusting, and the professional should know what to do. Yet many of them have no idea how to adjust the footwear to suit.

The success rate is 97% (Read Testimonies)

Prices are as follows: Steel Cap Boots: \$550

Strong Shoes/Boots with Threads: \$500

Medium Weight Shoes/Boots: \$450

Lightweight Shoes, Sandals and Scuffs: \$350

Comparing this to other footwear practitioners prices:

Similar to what is known as extra depth, but no orthotic: \$350
Add orthotic: \$350
Approx. Total: \$700

I like to encourage anyone to compare the Ovidio footwear with any other in other states for quality, modern styles, price, treatment success, weight, looks, and ready availability.

Private Health Fund

There are approximately 40 different private health funds which all pay towards our footwear, orthotics and realignment and rebalancing. This means that the private health member can wear the best of footwear at much less than purchasing them off the shelf.

A client told me that their health fund returned the full amount, while another client only had to pay \$20 for medical grade footwear when the total cost was \$650!
